Microtest AG

When **precision, reliability,**
and **safety** play an important role.

Microtest **Modular**

with **interchangeable**
measuring attachment system

Our most **versatile** internal micrometer

Available sizes:

ø 45 - 55	IW7001
ø 55 - 75	IW7002
ø 75 - 105	IW7003
ø 105 - 155	IW7004
ø 155 - 255	IW7005
ø 255 - 415	IW7006

Depending on the attachments, the diameter specifications may vary.

The high-precision Microtest spindle-system

About **us**

Microtest AG is for more than 60 years specializing in measurement of internal diameters.

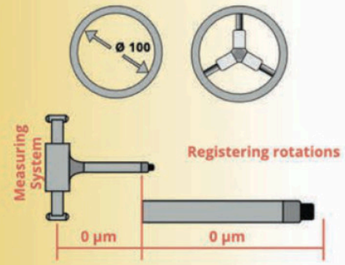

Through permanent optimization and constant development, our measuring instruments have reached a very high standard of precision, reliability, and universality for the high requirements of our customers.

Our products are in use all over the world
and guarantee the highest precision over long periods of use.

60+ YEARS
INNOVATIVE DESIGN & QUALITY SERVICE

Reduced thermal influence

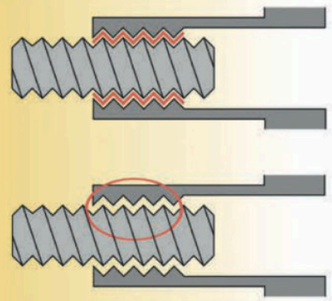

The MICROTEST® system exhibits **linear** behavior. Temperature expansion errors are largely compensated. Results at non-standard temperatures (other than 20°C) approximate the accuracy in the measuring room. Despite being largely temperature-independent in design, our measurement unit is insulated at user contact points to prevent unwanted heat transfer from the hands.

Automatic compensation of mechanical wear

MICROTEST® System: The measuring thread on the probe shows only minimal wear, which affects the entire range linearly due to the large surface contact on the thread flanks. After 1000 measurements at the same spot, only slight wear occurs, linear across the entire range, but barely detectable.

With the Microtest® system, you have automatic linear compensation with every routine adjustment!
